Hi, I'm going to show you how to use the Content Library within Express Me. The idea is that we already offer a lot of existing tiles in different styles in our library. You can simply search for a specific word that you'd like to add within the app. I'll show you that now.

We start at the top right on the blue figure, and then you'll see the third option there: Content Library. When we click on that, we're taken there, and we can say what we want to search for. We can think about an example for a moment. Let's say we want to search for a dog.

We can enter a search term here. In this case we'll do 'dog', and then we can search. Our entire library is then searched, and there are different styles, like I said. This happens to be a symbol set called Sclera, but let's say we want a different specific symbol set.

We have a number of options here. In this case I'll go for realistic. If I click confirm here, I can then search. And then we get two different images of a dog.

And what we can then simply do is click on the tile and then say: we'd like to duplicate dog to our content. And then below we can say: duplicate dog in this category. When we leave this mode, we see the new dog tile below.
